

Massachusetts Occupational Injuries and Illnesses

As Compiled by
The Massachusetts Division of Occupational Safety
and the U.S. Department of Labor

Transportation and Public Utilities Industry 2000 Report

The Massachusetts Division of Occupational Safety, in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, has produced both national and state-specific data on private sector workplace injuries and illnesses. Annual surveys are collected from private establishments in each state and processed by a designated agency. During the 2000 survey cycle, 5,805 establishments were surveyed in Massachusetts and 243,126 establishments were surveyed nationwide. The following data have been selected to give a detailed look at the Transportation and Public Utilities Industry in Massachusetts.

The State of Massachusetts recorded a population of 6,349,097 in the year 2000, and 2,866,344 of those people were employed in the private sector (408,760 people were also employed in the public sector). (Source: Massachusetts Division of Employment and

Chart 2: Incidence rates¹ of nonfatal injuries and illnesses (per 100 full time workers), Transportation and Public Utilities, MA & US 1996-2000

Chart 1: Percent employment in Massachusetts by industry, 2000

Employment is expressed as an annual average and is derived primarily from the BLS-State Covered Employment and Wages program.

Training, U.S. Department of Labor). Transportation and Public Utilities made up five percent of the total number of private industry employees in Massachusetts in 2000, or 141,000 workers. The Services Industry made up the largest portion of employees in 2000 at 40%, or 1,160,400 workers; Agriculture, Forestry, and Fishing had 24,000; Construction had 130,100; Manufacturing 436,100; Wholesale and Retail Trade 748,900; and Finance, Insurance, and Real Estate made up eight percent or 224,100 workers. (See Chart 1.)

Within the Transportation and Public Utilities Industry in Massachusetts, the incidence rate¹ of occupational injuries and illnesses was 8.2 in the year 2000, or a total of 10,900 occupational injuries and illnesses as a whole. In comparison, the rate in 1999 was 8.1, in 1998 the rate was 9.3, in 1997 it was 8.9 and in 1996 it was 9.0. See Chart 2 for a comparison of Massachusetts to the National rates.

Chart 3: Number of fatal occupational injuries by major industry, 2000

Source: U.S. Department of Labor, Bureau of Labor Statistics, in cooperation with State and Federal agencies, Census of Fatal Occupational Injuries

The Transportation and Public Utilities Industry suffered six occupational deaths in Massachusetts in the year 2000. Chart 3 details the major industries in Massachusetts and the number of fatalities that occurred in each. In 2000, the Agriculture, Forestry, and Fishing Industry had three fatal occupational injuries; Construction had 13; Manufacturing, eight; Wholesale and Retail Trade, 10; and Services had 18. The major causes of occupational deaths in Massachusetts were falls, homicides, and transportation accidents.

Chart 4: Number of nonfatal injuries and illnesses involving days away from work by nature of injury or illness, Transportation and Public Utilities, 2000

In the year 2000, Transportation and Public Utilities workers suffered 5,551 occupational injuries and illnesses involving days away from work. Chart 4 shows the distribution of the lost time injury cases by the nature of the injury or illness. Of the total, 3,287 injuries or illnesses were strains or sprains, 598 were bruises or contusions, 377 were cuts, lacerations, or punctures, and 183 were fractures. (See Chart 4 for all other natures of injury or illness and the numbers of workers they represent.)

Chart 5 details the total numbers of nonfatal injuries and illnesses for the years 1996 – 2000. These data indicate a steady increase in the number of injuries and illnesses within the Transportation and Public Utilities Industry in Massachusetts from 1996-1998, with a decrease in 1999 and 2000. 10,900 workers suffered occupational injuries or illnesses in 2000, 10,300 in 1999, 11,400 in 1998, 10,800 in 1997, and 10,200 in 1996. Of the 10,900 injuries and illnesses in 2000, most were the result of being struck by or against an object or equipment, overexertion, falls, or transportation accidents.

Chart 5: Total number of nonfatal injuries and illnesses, Transportation and Public Utilities, 1996-2000

Of the 10,900 total reportable cases of occupational injury and illness in 2000, about 7,000 of these cases resulted in days away from work or restricted workdays, or both, while about 3,900 injuries were cases without lost work days. Days away from work are counted

Chart 6: Lost work day v. Non-lost work day incidence rates¹ of nonfatal injuries and illnesses (per 100 full time workers), Transportation and Public Utilities, 1996-2000

if the employee misses any days AFTER the initial day of the occurrence of the injury or diagnosis of illness. Restricted work time is defined as light duty or a temporary transfer of duties due to an occupational injury or illness. Non-lost workday cases are those cases in which the employee is injured but returns the next day to work with no restrictions. The incidence rate¹ in 2000 of lost workday cases per 100 full time workers was 5.3. This represents a decrease in the rate from each of the four prior years. The incidence rate of non-lost workday cases was 3.0 in 2000, which represents an increase from 1999 but a decrease from the three prior years. (See Chart 6.)

¹ Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: $(N/EH) \times 200,000$ where

N = number of injuries and illnesses

EH = total hours worked by all employees during the calendar year.
200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

NOTE: Because of rounding, components may not add to totals.
